

## WASHINGTON- DULLES INTERNATIONAL AIRPORT MULTIPLE TERMINALS

---

### East Bag Basement

The East side of the main terminal is dedicated to the operations of United Airlines. BNP designed the original outbound baggage handling systems consisting of two tilt tray sorters and a connection to a remote sortation pier system. BNP also designed all the domestic arrivals claim devices within the terminal. Recently completed was the 100% hold baggage screening system constructed on multiple levels of a new basement expansion.

### West Bag Basement

The West side of the main terminal is dedicated to the operations of multiple domestic carriers. BNP was responsible for the design of the inbound, outbound, and 100% hold baggage screening systems.

### South Bag Basement

The South Bag Basement of the main terminal is dedicated to the operations of the foreign flag carriers. BNP was responsible for the design of the inbound, outbound, and 100% hold baggage screening systems.

### International Arrivals Facility

BNP was responsible for the design of all the baggage handling systems that support the IAD International Arrivals Facility.
