

# JOHN F KENNEDY INTERNATIONAL AIRPORT

Queens, New York

Airport Summary  
Brief

BNP Associates, Inc. has been designing baggage handling systems for JFK International Airport and its tenant airlines since the 1980's. Some of our major projects include:

## TERMINAL 1 NEW 100% AUTOMATED BAGGAGE SCREENING SYSTEM

Terminal 1 is owned by a consortium of foreign flag carriers. BNP designed the common use inbound and outbound baggage handling systems for this new facility. The outbound systems include 100% hold baggage screening, and an automated sortation system feeding all new make-up devices. The baggage claim facility supports both international and domestic flight arrivals.

## TERMINAL 4 REDEVELOPMENT PROJECTS

BNP was the original designer of the new Terminal 4 when the Port Authority of New York and New Jersey privatized the Terminal in the late 90's. Recently, the Terminal was expanded to accommodate the hub operations for Delta Air Lines as they migrated to Terminal 4 from the aging Terminal 3 building. BNP's design services included the implantation of 100% automated inline checked baggage screening systems and a major expansion of the inbound and outbound baggage handling systems.

## JETBLUE AIRLINES TERMINAL 5 BAGGAGE AND REMOTE CHECK-IN FACILITIES

BNP was the original designer of the baggage handling systems for TWA Airlines at Terminal 5 in the early 90's. Since that time, JetBlue has taken over the terminal site as well as the Terminal 6 site and BNP designed all the inbound, outbound, and 100% automated inline baggage screening systems for this new facility. BNP is also involved in a current project where the original Sarien Terminal is being converted to a hotel and will have remote baggage check facilities.

## BRITISH AIRWAYS TERMINAL 7 RENOVATION

Terminal 7 is under long term lease to British Airways and supports numerous tenant airlines. BNP has been involved in the design of numerous baggage systems at this terminal and is currently working on a major renovation.
