

TAMPA INTERNATIONAL AIRPORT

Tampa, Florida

Airport Summary
of Projects

BNP Associates, Inc. has been designing baggage handling systems with Tampa International Airport and the tenant airlines since the early 2000's. Some of our major project include:

Baggage Optimization Project

BNP Associates is currently involved in a multi-year program to enhance the security screening systems at TPA International Airport. BNP was responsible for the systems design, coordination and liaison with the TSA and construction administration services.

Computer Controls Replacement Project

BNP developed specifications for the replacement of the Master Control Systems that were in place since the early 2000's controlling the Landside Terminal Baggage Handling Systems. BNP's documents were used to competitively bid and procure the new host computer systems that were ultimately commissioned without interruption to any of the ongoing operations.

Consolidated Rental Car Baggage Handling System

BNP designed the Baggage Handling Systems to support the new CONRAC facility that was recently implemented at Tampa International Airport. The System allows baggage check in for domestic flights at the remote location where they are then transported by conveyors to a lateral. Vans are used to distribute the bags to the existing Landside Terminal CBIS and sortation systems.

Outbound Baggage Handling System Security Enhancement Project

The new baggage handling system project for TPA consisted of a complete replacement of the old outbound baggage systems in the Landside Terminal. The project was initiated almost immediately after 9/11 and became one of the first and largest airports to implement 100% inline baggage screening. This project was completed as a design-build effort with two (2) baggage system contractors and a CMAR.
